ABDALLAH ABDELHADY KHAMES

Data Analyst | Business Intelligence | Financial Analytics

xabdallahxabdallahx@gmail.com | +20 120 506 2962 | github.com/abdallah-bodzz | linkedin.com/in/abdallah-abdelhady-4187802b2 | abdallah-bodzz.github.io | Alexandria, Egypt

SUMMARY

Third-year CS student at Alexandria University (graduating 2027) with consistent project output across Python, Power BI, Excel, and SQL over the past 18 months. Completed 7 freelance data contracts for small businesses, built 7+ Power BI dashboards, shipped ML pipelines with quantified business impact ($3.55M ROI on a credit risk model), and built a computer vision fatigue detection system (DriveGuard) with a 98.8% CNN accuracy. Completed a quantitative event study on the 2026 Hormuz blockade and a government expenditure dashboard on Wake County open data. Portfolio: abdallah-bodzz.github.io. Comfortable owning the full pipeline from messy raw data to a clean, readable output for non-technical stakeholders.

SKILLS

- **Analytics and BI:** Power BI (DAX, drill-through, bookmarks, Key Influencers, forecasting), Excel (PivotTables, VLOOKUP/INDEX-MATCH, scenario analysis, DCF models, 3-statement financials)
- **Data and SQL:** SQL (PostgreSQL, MySQL, MS SQL Server), ETL design, data cleaning, deduplication, missing-value handling, schema design
- **Python:** pandas, NumPy, scikit-learn, XGBoost, LightGBM, Plotly, Matplotlib, statsmodels, yfinance, openpyxl
- **Statistics:** time-series analysis, event study (OLS, abnormal returns, rolling correlation), descriptive stats, volatility analysis
- **Financial Domain:** budget vs actuals reporting, government expenditure analysis, credit risk modeling, DCF valuation, WACC, VaR and Expected Shortfall
- **Tools:** Git, Jupyter, FastAPI, Docker, YAML, MLflow, OpenCV, MediaPipe, TensorFlow

RECENT PROJECTS

Wake County Government Expenditure Dashboard | Power BI | Open Data NC *Mar - May 2026*

- Building a multi-page Power BI report on Wake County, NC open government data: departmental spend, budget allocations, and actuals vs budget variance across fiscal periods
- Designed star-schema model from raw CSVs; DAX measures cover YTD spend, budget utilization, and variance flags; drill-through pages allow cost-center level exploration
- Structured to replicate a real public-sector BI workflow from raw ingestion to an executive-ready report with dynamic filters and bookmarked views

2026 Hormuz Crisis: Geopolitical Shock Transmission to Global Markets | Python | Time-Series*Apr - May 2026*

- Quantifying how the Feb-Apr 2026 US/Israel conflict and near-total Strait of Hormuz closure moved through oil, global equities, and energy stocks
- Method: Jan-Apr seasonal baseline across 2021-2026, three event windows (pre-strike / closure / reopening), cumulative abnormal returns via OLS, rolling 21-day volatility and cross-asset correlation
- Tickers: ^GSPC, BZ=F, CL=F, XOM, CVX, GC=F; includes a counterfactual 'what would 2026 have looked like without the shock' baseline for context
- Output: Jupyter notebook with event markers (Feb 28, Apr 7, Apr 17) and sector impact table; key finding: WTI +32.9% during closure while XOM fell −1.5% (beta flipped from +0.15 to −0.42) — energy equities are not oil proxies in supply shocks; gold dropped −9.6% (safe-haven failure under margin pressure)

PROJECTS

Power BI Dashboard Suite | 6 dashboards: Mortgage, Churn, HR, Supply Chain, Financial, Time-Series *Nov 2024 - Feb 2025*

- Mortgage trading desk simulation: counterparty bid evaluation, FICO-based pricing, benchmark testing (DataCamp capstone)
- 12-page financial analysis dashboard: revenue and profit decomposition, NPV/IRR capital budgeting, scenario modeling with dynamic assumptions
- Customer churn analysis (Databel, 6,687 customers, 26.86% churn rate): breakdown by geography, contract type, and data plan; replicated in Excel with PivotTables

- HR attrition report (Atlas Labs): department/role/tenure breakdown; automated variance logic surfaced 3 high-attrition clusters on first load

Credit Risk Scoring Pipeline | Python | XGBoost | LightGBM *Sep - Nov 2024*

- End-to-end loan default prediction: EDA, feature engineering, model comparison (LR, RF, XGBoost, LightGBM), probability calibration, business-optimized threshold
- Quantified at $3.55M net benefit per 10k loans (152% ROI); reusable preprocessing module cut feature prep time by roughly 30%

Fraud Detection API | Python | FastAPI | Docker *Aug - Sep 2024*

- XGBoost classifier at AUPRC 0.87 on 0.17% fraud-rate data; threshold tuned for dollars saved ($10,576 per run) rather than F1 score
- Deployed with FastAPI, Docker, rate limiting, and structured logging; a working service, not a notebook

DCF Valuation Engine + Financial Excel Models | Python | FastAPI | yfinance | Excel*Jun - Aug 2024*

- DCF tool with live data via yfinance, WACC discounting, Gordon Growth terminal value, and a 7x7 sensitivity heatmap; FastAPI backend with Chart.js UI
- Companion Excel work: NRM business case (HealthMax FMCG) covering market share, promotional ROI, and subcategory opportunity sizing

DriveGuard — Real-Time Driver Fatigue Detection | Python | OpenCV | MediaPipe | TensorFlow*Apr 2026*

- Computer vision system detecting driver drowsiness in real time via webcam; combines EAR/MAR geometry with a CNN hybrid (24x24 grayscale model trained on 84k eye images, MRL dataset) for reliable eye-state classification — 98.8% validation accuracy, 3–5ms inference per eye on CPU
- Dual-timescale fatigue scoring model (short-term + long-term components), head pose estimation via solvePnP, gesture-based alarm dismissal; runs at 25–30 FPS with full incident recording and CSV session export; 100% local, no cloud dependency

EXPERIENCE

Freelance Data Analyst | Khamsat.com (خمسات) | Remote *Jun - Sep 2025*

- Completed 4 data cleaning contracts; files in Excel and CSV
- Work covered deduplication, date format correction, category standardization, and missing-value handling using Excel formulas and pandas
- Added summary dashboards on two engagements without being asked; one client returned for follow-on reporting work

Freelance Data Processor | Mostaqel (مستقل) | Remote *Oct - Dec 2025*

- Won 3 bids for data entry and Excel formatting; delivered cleaned files with pivot tables and basic charts beyond the agreed scope
- Spotted 15+ pricing mismatches in a retailer's inventory sheet and flagged them before the client published; acknowledged in their review
- Finished all contracts on time

Data Analytics Content Creator | TikTok @data_w_bodzz | YouTube | Instagram *2023 - Present*

- 1,500+ followers and 200,000+ total views documenting Power BI builds, SQL walkthroughs, and project breakdowns
- Top video (Power BI normalization and lookup tables) reached 16,000+ views; demonstrates ability to explain technical topics in plain language

EDUCATION

B.Sc. Computer Science, Data Science Specialization | Alexandria University (FCDS), Egypt*Expected 2027*

- DataCamp career tracks completed: Data Analysis in Python, SQL, Excel, Power BI, Machine Learning and Neural Networks
- Relevant coursework: Statistics, Databases, Algorithms, Machine Learning, Data Structures

LANGUAGES

- **Arabic:** Native | **English:** Professional Working Proficiency
